SCAN PORTFOLIO

May 2027 internships | Quantitative Research / Developer Internships | Across India

EDUCATION

Vellore Institute of Technology (VIT), Vellore *2024–2028 (Expected)*

B.Tech in Mechanical Engineering, CGPA: **8.86 / 10**

EXPERIENCE

Alvionx *Sep 2026–Present*

Fintech Intern

- Journaled **172 completed trades** across backtesting work; documented liquidation-based ETH/BTC signals, entries, exits and trade rationale.
- Backtested Reliance price triggers: invest **10% of remaining cash** per 5% decline from the last buy; exit 5% above weighted-average cost.
- Applied EMA, candlestick and price-action exit rules with a **1:2 target risk-to-reward**; used defined risk limits to structure entry and exit reviews.

LearnTube.ai *Oct 2025–Jan 2026*

Data Analytics Intern

- Developed forecasting and data-validation workflows using stationarity tests, seasonal decomposition, error comparisons and checks for missing values, duplicates and outliers.

PROJECTS

Quant Execution Lab *Code & evidence*

Python, SQLite | Synthetic execution research

- Built FIFO limit-order matching, partial fills, IOC handling and transactional replay; verified **5,000 events** against an independent reference.
- Compared immediate and TWAP schedules on **100 paired paths**, accounting for fees and missed fills; added bootstrap intervals and **20 tests**.

Indian Real Estate Quant Research *Code & evidence*

Python, statsmodels | Listed-property research and risk

- Built walk-forward cointegration / Kalman research with execution costs and borrow assumptions; published **1,675 OOS observations** and a negative baseline.
- Added causal 252-day downside-risk forecasts and cash-period diagnostics; passed **27 tests** covering signal timing, leakage, accounting and tail risk.

Bengaluru Office Investment & Asset Management *Code & evidence*

Python, SQL, Excel | Public filings + labelled synthetic cases

- Built acquisition cash flows, amortising debt and DSCR screens; tested **3 scenarios, 25 sensitivities and 2,000 stress simulations**.
- Reconciled Embassy NAV/debt and a **10-year Excel case**; added lease-risk and NOI variance reporting for 4 synthetic assets, backed by **21 tests**.

SKILLS

Quantitative: Time series, backtesting, risk diagnostics, execution simulation, bootstrap inference.

Tools: Python, pandas, NumPy, SQL/SQLite, Excel, scikit-learn, statsmodels, Git/GitHub.

CERTIFICATIONS

Google AI Essentials — Google / Coursera (Dec 2025) | MATLAB Onramp — MathWorks (Jan 2026) | Python — Kaggle (Dec 2025) | Data Analytics — Skillsetmaster (Jan 2026)

Artificial Intelligence — Skillumni (Apr 2026) | Onshape Hands-On Test Drive — Onshape by PTC (Aug 2026) | Data Analytics Assessment — LearnTube.ai (Jan 2026, ID DJA-B-1-1989388-0) | Time Series Forecasting Assessment — LearnTube.ai (Jan 2026, ID DJA-B-1-1989425-0)
