Seeking May 2027 internships | Open to opportunities across India

PROFILE

Mechanical Engineering undergraduate with quantitative research internship experience and projects in real estate underwriting, portfolio optimisation and business analytics. Applies Python, SQL and machine learning to cash-flow analysis, risk assessment and data-driven decisions.

EDUCATION

Vellore Institute of Technology, Vellore | B.Tech, Mechanical Engineering

2024 - 2028 (expected) | CGPA: 8.86/10

EXPERIENCE

Alvionx | Quantitative Research Intern | Sep 2026 - Present

- Backtest algorithmic trading strategies using the CoinDCX platform; study liquidity, technical indicators and candlestick patterns to evaluate trading signals.
- Apply probability concepts to risk management and trading decisions, assessing uncertainty alongside historical strategy behaviour.

LearnTube.ai | Data Analytics Intern | Oct 2025 - Jan 2026

- Built a time-series forecasting workflow covering resampling, stationarity testing, seasonal decomposition and baseline-versus-model error comparison.
- Validated operational data for schema consistency, missing values, duplicates and outliers; translated findings into recommendations, charts and summary tables.

SELECTED PROJECTS

Bengaluru Office Acquisition Underwriting | Python | Case study & code

- Developed a five-year illustrative acquisition model covering rental cash flows, lease rollover, tenant improvements, amortizing debt, DCF valuation, NPV and disposal proceeds.
- Evaluated three scenarios, 25 rent-growth / exit-cap combinations and 2,000 correlated stress simulations; identified a model-based entry-price ceiling of INR 83.53 crore against an illustrative INR 100 crore asking price.
- Published an investment memo, auditable cash-flow exports and 10 automated tests; explicitly documented synthetic inputs, additional equity contributions and model limitations.

Vendor Performance Analytics | Python, SQL, Power BI | GitHub

- Built a vendor analytics workflow with a reusable data pipeline, SQLite analysis, Power BI reporting and a Streamlit app; reconciled dataset sales of USD 451.6 million and 28.72% weighted profit margin.
- Analysed procurement concentration, inventory working capital and vendor segments using Pareto / ABC analysis, HHI and bootstrap confidence intervals.

Real Estate Portfolio Optimisation | Python, SciPy, CVXPY | GitHub

- Implemented constrained portfolio allocation using quadratic programming, particle swarm and genetic algorithms; compared risk-return outcomes with reproducible Monte Carlo evaluation.

SKILLS & SELECTED CERTIFICATIONS

Investment analysis: Property cash-flow modelling, DCF / NPV, debt schedules, DSCR, scenario and sensitivity analysis, portfolio risk analysis (demonstrated through projects).

Data & ML: Python, pandas, NumPy, scikit-learn, statsmodels, SQL, Excel, Power BI, Streamlit; regression, classification, feature engineering, cross-validation, hypothesis testing, forecasting.

Tools: Git / GitHub, Jupyter, MATLAB, SolidWorks, Onshape.

Certifications: Python - Kaggle (2025); Google AI Essentials - Coursera (2025); Data Analytics and Time Series Forecasting Assessments - LearnTube.ai (2026).
