SCAN PORTFOLIO

May 2027 internships | Quantitative Research / Developer Internships | Across India

## EDUCATION

**Vellore Institute of Technology (VIT), Vellore** *2024–2028 (Expected)*

B.Tech in Mechanical Engineering, CGPA: **8.86 / 10**

## EXPERIENCE

**Alvionx** *Sep 2026–Present*

*Fintech Intern*

- Journaled **172 completed trades** across backtesting work; documented liquidation-based ETH/BTC signals, entries, exits and trade rationale.
- Backtested Reliance price triggers: invest **10% of remaining cash** per 5% decline from the last buy; exit 5% above weighted-average cost.
- Applied EMA, candlestick and price-action exit rules with a **1:2 target risk-to-reward**; documented trade rationale without claiming realised returns.

**LearnTube.ai** *Oct 2025–Jan 2026*

*Data Analytics Intern*

- Developed forecasting and data-validation workflows using stationarity tests, seasonal decomposition, error comparisons and checks for missing values, duplicates and outliers.

## PROJECTS

**Deterministic Order Matching & Replay** *GitHub / evidence*

*Python, SQLite | Synthetic order flow*

- Built price-time-priority limit-order matching with partial fills, cancellation and IOC handling; checked **5,000 events** against an independent reference.
- Added transactional event storage, idempotent retries and restart replay; passed **12 tests** covering conservation, invalid input and corrupted history.

**Indian Listed Real Estate Relative-Value Research** *GitHub / evidence*

*Python, pandas | Historical baseline*

- Evaluated **1,675 out-of-sample observations** with transaction costs and explicit borrowing assumptions; documented a negative historical baseline.
- Reported **−0.71% CAGR and −0.13 Sharpe** rather than claiming alpha; separated historical evaluation from synthetic HMM/yield demonstrations.

**Opti-Workbench — Constrained Allocation Research** *GitHub / evidence*

*Python, CVXPY | Synthetic universes*

- Combined empirical-CVaR convex seeding with PSO/GA refinement; examined cardinality through subset enumeration and shortlist screening.
- Documented feasibility and objective differences between convex seeds and heuristic refinement; avoided claims of exact mixed-integer optimisation.

## SKILLS

**Quantitative:** Backtesting, time series, portfolio risk, constrained optimisation, statistical validation.

**Tools:** Python, pandas, NumPy, SQL, Excel, Power BI, scikit-learn, statsmodels, Git/GitHub.

## CERTIFICATIONS

Google AI Essentials — Google / Coursera (Dec 2025) | MATLAB Onramp — MathWorks (Jan 2026) | Python — Kaggle (Dec 2025) | Data Analytics — Skillsetmaster (Jan 2026)

Artificial Intelligence — Skillumni (Apr 2026) | Onshape Hands-On Test Drive — Onshape by PTC (Aug 2026) | Data Analytics Assessment — LearnTube.ai (Jan 2026, ID DJA-B-1-1989388-0) | Time Series Forecasting Assessment — LearnTube.ai (Jan 2026, ID DJA-B-1-1989425-0)
